Learning Objectives

Winding is the heart of motors and generators. It is important to keep the windings in good condition for the satisfactory operations of the electrical machines used in our houses and industries. If we have basic knowledge and experience in knowing all details about motor's rewinding procedure, not only it helps to know the operation of motors and generators but also to the self-employment. There are number of persons in the motor rewinding field by their own experience, without any proper studies in the electrical engineering field. If our students get good experience with proper knowledge details about motor rewinding, there is no doubt in becoming great achievers this field.
