Related information

Coffee percolator is a heating appliance used for domestic purpose. This appliance is similar to electric kettle. In this appliance a percolating tube is in centre of the container and coffee basket is kept over it. After coffee powder is put on the basket, the lid is closed and electric supply is given. Then the water in the container gets heated, and the steam soaks the coffee powder and coffee water is collected in the container and can be used when required. In some appliances, the lid is made of glass to know the thickness of the coffee water.
