The steam iron requires more duration to get heated when compared to the other types of iron the clothes.

In this, a small water container is kept above heating element and it supplies water to sole plate through the holes provided in it. The water steam flow is controlled by a press valve kept near the handle. The valve control is provided in handle in order to control the water flow easily. The valve will not allow the water or steam to back side. The water in the tank comes through holes in sole plate in the form of steam. Once the valve gets opened, the steam reaches the cloth and the wrinkles in the cloth will be cleared. The flow of steam upon the position of the knob is kept in it. Any defects in the heating element may cause the unit to be replaced by a new one.

a) Maintenance

1. In steam iron box, distilled water should only be used.
2. After the use of iron box, the water in the container should be removed completely with the help of steam control valve.
3. The salt deposits inside the iron box should be cleaned with the help of vinegar. The vinegar is mixed with water and is rinsed inside two or three times to clear the salt depositions in it.

3.2.6 Trouble shoot chart

Sl. No.	Defects	Reasons	Remedies
1.	Iron box not gets heated.	1. No electric supply.	1. Correct the electric supply.
		2. Heating element is not connected with supply.	2. Connect the supply to the heating element properly.
		3. Loose connection in heating element.	3. Heating element should be connected properly.
2.	Heat produced in the iron box is not adequate.	1. Voltage drop.	1. Correct the voltage.
		2. Thermostat knob not fitted properly.	2. Proper fitting of thermostat knob should be done.
		3. Loose connection in thermostat.	3. Thermostat connection should be done properly
3.	Heat produced is exceeding the setting point kept.	1. Short circuit in thermostat.	1. Short circuit in thermostat is corrected.
			2. Emery sheet should be used for cleaning the terminal ends to avoid short circuit.
