3.4.1 Types

The most common household toaster is classified as

i. Ordinary type bread toaster, and
ii. Automatic type.

Ordinary type of bread toaster is not used in now-a-days.

3.4.2 Automatic bread toaster

a) Construction

Electric bread toaster looks like a rectangular box and is used for toasting the bread slices as shown in figure 3.7. In this, two gaps are provided, in which two bread slices are put for toasting. The gap is adequate for bread slices to go inside. Bread toaster contains three heating elements and they are in front, middle and back side of the toaster. The centre heating element is the main element for toasting. A resting thick sheet is kept inside the toaster and is attached with a lever. A Thermostat, the heat control device is connected in series with heating element and to the supply. Three pin power chords are used as supply wire for the appliance. Handle is made of hard plastics which insulates the heat and electric supply. A tray is kept below the toaster, in order to collect the waste particles of bread.

Fig. 3.7 **Bread toaster**

b) Working principle

The bread slices are kept in the place of bread resting container, and put the lever down to make the bread slices to get in. Then close the top of the toaster with lid, and allow the supply to get toasted. After the bread slices gets toasted, the thermostat which is connected in series with electric supply disconnect the supply and pushes the lever up. Now the toasted slices came out with golden colour.

The use of Thermostat is to allow and disconnect the power supply when the toaster is in use.

3.4.3 Defects, reasons and remedies of electric bread toaster

Sl. No.	Defects	Reasons	Remedies
1.	Supply is given, but the toaster not functioning	1. There may be open circuit or short circuit in the power chord.	1. Open circuit or Short circuit in the power chord should be checked before giving the supply.
		2. The supply terminals not connected with heating element.	2. Connect the terminals of the heating element correctly.
