3.5.2 Construction

Coffee percolator is portable device as shown in figure 3.8. In this, the coil is made up of nichrome and is used as heating element. Because of its high resistance in the coil, the electrical energy is converted into heat energy. The appliance is cylindrical in shape and is made up of iron coated with lead. Water is poured into the container. A coffee basket is kept above the vertical tube. In some appliances, the lid is made up of glass. In certain type of coffee percolator, the chamber for hot water and coffee water are seprated. Handle is made up of non-conductive materials like bakelite, which resists heat produced in it.
