2	Fan rotates in low speed.	Low voltage	Check the voltage.
		Fault in capacitor.	Change the new capacitor.
		Bearing is tight	Check the bearing and apply lubricants.
3	The fan is not rotating. If we rotate it, then only it runs.	Problems in starting coil	Replace or rewind the starting coil.
		Low voltage	Check the voltage, and then switch 'on'
		Due to the weakness of the capacitor.	Change the capacitor
4	More noise while rotating.	Worn out bearings.	Change and put new bearing
		The spacing gap of the bearing.	Spacing should be made right in bearing.
		Blade ia not fitted properly	Connect the blades properly.

4.3 Electric washing machine

Nowadays, electric washing machines are used by middle class family in large number. We use washing machine for washing and drying of clothes.

AF592H

Do you Know?

Who invented electric motor first?

In 1831 Joseph Henry, a physicist, creates machine movement of the first motor by using electricity.

Types

i. Semi-automatic washing machine
ii. Automatic washing machine
   A. Top loading washing machine
   B. Front loading washing machine

4.3.1 Semi automatic washing machine

Fig. 4.18 Semi automatic washing machine

a) Construction

Semi-automatic type of washing machine is for washing the clothes and is shown in figure 4.18. This appliance is controlled by timer which control and regulate the time of washing according to the type of cloths and also dries the cloth after washing.

Capacitor start induction motor is used in this type of washing machine.
