The main features of electric drives are given below

i. During starting the drive needs more torque.
ii. For economic reasons, AC traction requires single phase supply.
iii. For AC and DC, it causes interference in telephone lines and signals.
iv. Traction machines are mainly used for dynamic braking.
v. Mechanical brake is used where the engine need to stop at exact place.

Do you Know?

Very high speed trains (Bullet trains)

There is no engine in most high-speed trains. It runs to a speed of 600 km/hour. These trains operate in magnetic levitation mode. If attraction and repulsion forces are in equal, the train will be above the track. When the speed of the force increases, connecting trains will also run at high speed.
