Effects on Materials

S.No.	Material	Pollutant	Effects on materials
1	Building material	So_2, acid gases, etc	Discolouration due to moisture
2	Metals	So_2, acid gases, etc	Tarnishing surface due to moisture and temperature
3	Paints	So_2, H_2	Discolouration due to moisture and fungus
4	Ceramics	So_2,acid gases	Discolouration due to moisture
5	Rubber	Oxidants	Crackling due to sunlight
6	Electric and electronic parts	Air borne, ozone	Degradation due to wind

Prevention and Control of Air Pollution

The control of air pollution is ultimately an engineering problem. The World Health Organisation (WHO) recommended the following procedures for the prevention and control of air pollution.

1. Containment

The prevention of escape of toxic substances into the ambient air containment can be achieved by a variety of engineering methods such as enclosures, ventilation and cleaning.

2. Replacement

Replacing the technological process causing air pollution by a new process that does not cause air pollution. Increased use of electricity and natural gas in place of coal is a new process of replacement.

3. Pollution dilution

It is a dilution within the self-cleaning capacity of the environment. Some air pollutants are readily diluted by vegetation. The establishment of green belts between industrial and residential area is a method of dilution. The dilution becomes very difficult when the atmosphere is over burdened with pollutants.
