1.7.1 Housing Demand

The factors that increase the housing demand are detailed below:

i. If housing loans are available for a low interest rate, then the housing demand will increase.

ii. It also depends on the availability of skilled labour. If good number of skilled labours are available, then the people will be inclined to construct houses without delay.

iii. Availability of good road facilities is also one of the major reasons for housing development. For example, if a housing site is available in a place which doesn't have good roads, no one will be prepared to construct their houses in that area.

iv. Real estate agents should develop plots in an area with all basic amenities and then sell it. Then only the people will tend to construct houses immediately.

v. Huge population, less number of houses, surrounding environment and basic facilities are the reasons for increase in development of housing units.

1.7.2 Types of residential houses

i. Detached houses or independent houses.

ii. Semi–detached houses

iii. Row houses

iv. Apartments or flats

v. Skyscrapers

i. *Detached houses or independent houses*

Houses which are alone and independent could be classified under this category.

Independent houses have good air circulation, ample lighting and there is always a feasibility for extending or modifying the existing house in its own land.

Houses of such type are constructed based upon the availability of lands and financial prospects. If the plots are available for a lesser price and if the construction materials are readily and cheaply available, then one could utilize such opportunities for the construction of detached houses. However such houses are luxurious and not thrift enough.

ii. *Semi–detached houses*

If an independent house is separated to accomodate two families, then it is considered as "Semi–detached house".

A common wall is used to separate the two houses. If sufficient frontage is

allowed in the front for both the houses, then it could be utilized in common by both the families.
