iii. *Row houses*

Row houses are generally constructed for labourers and people working on daily wages. The reason is they are economical, suiting to their financial status.

Such houses will have only the minimum basic amenities. Bathrooms and toilets will be in common. Cost of such construction is very low. Therefore more number of people could be provided housing at lesser cost. Such row houses could be constructed with one or two floors.

In prime locations and in congested localities of a city, it is difficult even for high income group people to purchase a plot and construct a house of their own. This lead to the construction of apartments or flats. Also people who like community living prefer apartments.

The cost of construction is much reduced when compared to the construction cost of an independent house. The reason is the cost of the land is shared and also the cost involved in common facilities is being divided among the families.

Disadvantages

- Not suited for large families with lot of children.
- Not possible to renovate, change, demolish and reconstruct the house.

Tallest building in India

Three Sixty West is a super tall skyscraper under construction in Mumbai, Maharashtra, India. It comprises two tower, joined at ground level by a podium. Tower B, the tall of the two, will rise to 372 metres (1,120 ft) and 85 floors and Tower A will be 260 metres (853 ft) and 53 floors. Tower A will be hotel and private residence will be located in Tower B. The podium will accommodate amenities such as restaurants and ballrooms.

iv. *Skyscrapers*

- Skyscrapers are generally buildings of many stories (more than fifty stories or 150 m) seeming to touch the sky when looked from the ground.
