

The advantages of the cold formed steel sections over hot rolled sections are:

1. Cold formed steel sections are thinner so that we can get more length of the material from the same weight of steel.
2. A more economical design for light loads and moderate spans can be made from these sections.
3. A more favorable strength to weight ratio can be achieved through these sections.
4. Aesthetically pleasing box sections can be made for fabrication. This can be made to look as wood by necessary painting (or) other treatments.
5. Cold formed steel sections have higher strength than hot rolled steel sections. These are extensively used in fabrication of roof trusses.

Activity 3

Collect various types of rods and rolled steel sections and display it in your class room.

2.7.3 Stainless steel

Stainless steel is a general term given to certain alloys of iron, chromium and nickel. This type of steel has high resistance to corrosion. It is designated by the percentage of chromium and nickel. Example: 18-8 stainless steel indicates 18 percent chromium 8 percent nickel.

(i) Advantages of Stainless steel

The following are the advantages of using Stainless Steel.

- Life-cycle cost benefits.
- Excellent corrosion resistance.
- 100% Recyclable.
- 80% Recycled content.
- High ductility and strength.
- Non-magnetic.
- Excellent high and low temperature properties.
- Resistance to unsightly staining.
- Aesthetic surface finish.
