(ii) Classification of damp proofing materials

The materials commonly used to prevent dampness can be classified into the following four categories

(1) Flexible material

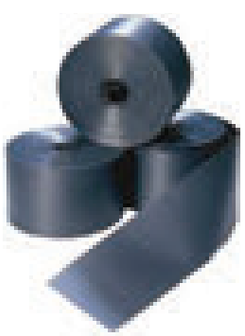

(2) Semi rigid materials

(3) Rigid materials

(4) Grout materials

1. Flexible materials like butyl rubber, hot bitumen (asphalt), plastic sheets, bituminous felts, sheets of lead, copper, etc.
2. Semi-rigid materials like mastic asphalt.
3. Rigid materials, like impervious brick, stone, slate, cement mortar, or cement concrete painted with bitumen, etc.
4. Grout material like mortar with waterproofing compounds.

2.8.3 Fly ash

Fly ash is obtained by combustion of coal in thermal power plants. Fly ash is a pozzolana, containing aluminous and siliceous material that forms cement in the presence of water. When mixed with lime and water, fly ash forms a compound similar to Portland cement. This makes fly ash suitable as a prime material in blended cement, mosaic tiles, and hollow blocks, among other building materials. When used in concrete mixes, fly ash improves the strength, durability and makes it easier to pump.

(i) Fly ash bricks

Fly ash bricks, is competitive when compared to the conventional clay bricks, as it provides enormous indirect benefits.
