Example 8.11 Programs using Strings :

Example 8.11.1 : Program to check whether the given string is palindrome or not

```
str1 = input ("Enter a string: ")
str2 = ' '
index=-1
for i in str1:
        str2 += str1[index]
        index -= 1
print ("The given string = { } \n The Reversed string = { }".format(str1, str2))
if (str1==str2):
        print ("Hence, the given string is Palindrome")
else:
        print ("Hence, the given is not a palindrome")
```

Output : 1

```
Enter a string: malayalam
The given string = malayalam
The Reversed string = malayalam
Hence, the given string is Palindrome
```

Output : 2

```
Enter a string: welcome
The given string = welcome
The Reversed string = emoclew
Hence, the given string is not a palindrome
```

Example 8.11.2 : Program to display the following pattern

```
*
* *
* * *
* * * *
* * * * *
str1=' * '
i=1
while i<=5:
        print (str1*i)
        i+=1
```

Output

```
*
* *
* * *
* * * *
* * * * *
```
