max( )	Returns the maximum value in a list.	max(list)	MyList=[21,76,98,23] print(max(MyList)) **Output:** 98
min( )	Returns the minimum value in a list.	min(list)	MyList=[21,76,98,23] print(min(MyList)) **Output:** 21
sum( )	Returns the sum of values in a list.	sum(list)	MyList=[21,76,98,23] print(sum(MyList)) **Output:** 218

9.1.12 Programs using List

Program 1: write a program that creates a list of numbers from 1 to 20 that are divisible by 4

```
divBy4=[ ]
for i in range(21):
        if (i%4==0):
                divBy4.append(i)
print(divBy4)
```

Output

[0, 4, 8, 12, 16, 20]

Program 2: Write a program to define a list of countries that are a member of BRICS. Check whether a county is member of BRICS or not

```
country=["India", "Russia", "Srilanka", "China", "Brazil"]
is_member = input("Enter the name of the country: ")
if is_member in country:
        print(is_member, " is the member of BRICS")
else:
        print(is_member, " is not a member of BRICS")
```

Output

Enter the name of the country: India
India is the member of BRICS

Output

Enter the name of the country: Japan
Japan is not a member of BRICS
