Syntax:

```
# To delete a particular element.
del dictionary_name[key]
# To delete all the elements
dictionary_name.clear( )
# To delete an entire dictionary
del dictionary_name
```

Example : Program to delete elements from a dictionary and finally deletes the dictionary.

```
Dict = {'Roll No' : 12001, 'SName' : 'Meena', 'Mark1' : 98, 'Marl2' : 86}
print("Dictionary elements before deletion: \n", Dict)
del Dict['Mark1']          # Deleting a particular element
print("Dictionary elements after deletion of a element: \n", Dict)
Dict.clear()               # Deleting all elements
print("Dictionary after deletion of all elements: \n", Dict)
del Dict
print(Dict)                # Deleting entire dictionary
```

Output:

```
Dictionary elements before deletion:
    {'Roll No': 12001, 'SName': 'Meena', 'Mark1': 98, 'Marl2': 86}
Dictionary elements after deletion of a element:
    {'Roll No': 12001, 'SName': 'Meena', 'Marl2': 86}
Dictionary after deletion of all elements:
    { }
Traceback (most recent call last):
    File "E:/Python/Dict_Test_02.py", line 8, in <module>
    print(Dict)
NameError: name 'Dict' is not defined
```

9.4.4 Difference between List and Dictionary

(1) List is an ordered set of elements. But, a dictionary is a data structure that is used for matching one element (Key) with another (Value).

(2) The index values can be used to access a particular element. But, in dictionary key represents index. Remember that, key may be a number of a string.

(3) Lists are used to look up a value whereas a dictionary is used to take one value and look up another value.
