Files saved in excel cannot be opened or edited by text editors.

13.3 Purpose Of CSV File

CSV is a simple **file format** used to store tabular data, such as a spreadsheet or database. Since they're plain text, they're easier to import into a spreadsheet or another storage database, regardless of the specific software you're using.

You can open CSV files in a spreadsheet program like Microsoft Excel or in a text editor or through a database which make them easier to read.

Note

CSV File cannot store charts or graphs. It stores data but does not contain formatting, formulas, macros, etc.

A CSV file is also known as a Flat File. Files in the CSV format can be imported to and exported from programs that store data in tables, such as ***Microsoft Excel*** or ***OpenOfficeCalc***

13.4 Creating a CSV file using Notepad (or any text editor)

A CSV file is a text file, so it can be created and edited using any text editor, But more frequently a CSV file is created by exporting a spreadsheet or database in the program that created it.

13.4.1 Creating CSV Normal File

To create a CSV file in Notepad, First open a new file using

File →New or ctrl +N.

Then enter the data you want the file to contain, separating each value with a comma and each row with a new line.

For example consider the following details

```
Topic1,Topic2,Topic3
one,two,three
Example1,Example2,Example3
```

Save this content in a file with the extension .csv . You can then open the same using Microsoft Excel or any other spreadsheet program. Here we have opened using Microsoft Excel. It would create a table of data similar to the following:
