Note

A dialect is a class of csv module which helps to define parameters for reading and writing CSV. It allows you to create, store, and re-use various formatting parameters for your data.

13.6.1.1.3 CSV File-Data With Quotes

You can read the csv file with quotes, by registering new dialects using csv.register_dialect() class of csv module.

Here, we have quotes.csv file with following data.

```
SNO,Quotes
1, "The secret to getting ahead is getting started."
2, "Excellence is a continuous process and not an accident."
3, "Work hard dream big never give up and believe yourself."
4, "Failure is the opportunity to begin again more intelligently."
5, "The successful warrior is the average man, with laser-like focus."
```

The following Program read “quotes.csv” file, where delimiter is comma (,) but the quotes are within quotes (“ “).

```
import csv
csv.register_dialect('myDialect',delimiter = ',',quoting=csv.QUOTE_ALL,
skipinitialspace=True)
f=open('c:\pyprg\quotes.csv','r')
reader = csv.reader(f, dialect='myDialect')
for row in reader:
    print(row)
```

OUTPUT

```
['SNO', 'Quotes']
['1', 'The secret to getting ahead is getting started.']
['2', 'Excellence is a continuous process and not an accident.']
['3', 'Work hard dream big never give up and believe yourself.']
['4', 'Failure is the opportunity to begin again more intelligently.']
['5', 'The successful warrior is the average man, with laser-like focus. ']
```

In the above program, register a dialect with name myDialect. Then, we used **csv. QUOTE_ALL to display all the characters** after double quotes.
