13.6.1.1.4 CSV files with Custom Delimiters

You can read CSV file having custom delimiter by registering a new dialect with the help of csv.register_dialect().

In the following file called "sample4.csv",each column is separated with | (Pipe symbol)

Roll No | Name | City
12101 | Arun | Chennai
12102 | Meena | Kovai
12103 | Ram | Nellai

The following program read the file "sample4.csv" with user defined delimiter "|"

```
import csv
csv.register_dialect('myDialect', delimiter = '|')
with open('c:\pyprg\sample4.csv', 'r') as f:
    reader = csv.reader(f, dialect='myDialect')
    for row in reader:
        print(row)
f.close()
```

OUTPUT

```
['RollNo', 'Name', 'City']
['12101', 'Arun', 'Chennai']
['12102', 'Meena', 'Kovai']
['12103', 'Ram', 'Nellai']
```

In the above program, a new dialects called myDialect is registered. Use the delimiter=| where a pipe (|) is considered as column separator.

13.6.2 Read a specific column In a File

To get the specific columns like only Item Name and profit for the "sample5.csv" file . Then you have to do the following:

```
import csv
#opening the csv file which is in different location with read mode
f=open("c:\pyprg\ch13sample5.csv",'r')
#reading the File with the help of csv.reader()
readFile=csv.reader(f)
#printing the selected column
for col in readFile :
    print (col[0],col[3])
f.close()
```
