```
import csv
row = ['6', 'Sajini ', 'Madurai']
with open('student.csv', 'a') as CF:            # append mode to add data at the end
    writer = csv.writer(CF)
    writer.writerow(row)    # writerow() method write a single row of data in file
CF.close()
```

When "student.csv" file is opened with a text editor, it displays as follows

Roll No, Name, City

1, Harshini, Chennai

2, Adhith, Mumbai

3, Meena, Bangalore

4, Krishna, Tiruchy

5, Venkat, Madurai

6, Sajini, Madurai

In the above program, a new row is appended into "student.csv". For this, purpose only the CSV file is opened in 'a' append mode. Append mode write the value of row after the last line of the "student.csv file."

The 'w' write mode creates a new file. If the file is already existing 'w' mode over writs it. Where as 'a' append mode add the data at the end of the file if the file already exists otherwise creates a new one

Note

writerow() takes 1-dimensional data (one row), and writerows takes 2-dimensional data (multiple rows) to write in a file.

13.7.3 CSV Files With Quotes

You can write the csv file with quotes, by registering new dialects using **csv.register_dialect()** class of csv module. The following program explains this.
