When you open the "peak.csv" file in notepad, you get the following output:

```
MOUNTAIN,HEIGHT
Everest,8848
Anamudi,2695
Kanchenjunga,8586
```

In the above program, use fieldnames as headings of each column in csv file. Then, use a DictWriter() to write dictionary data into "peak.csv" file.

13.7.7.1 Writing Dictionary Into CSV File With Custom Dialects

```
import csv
csv.register_dialect('myDialect', delimiter = '|', quoting=csv.QUOTE_ALL)
with open('c:\pyprg\ch13\grade.csv', 'w') as csvfile:
    fieldnames = ['Name', 'Grade']
    writer = csv.DictWriter(csvfile, fieldnames=fieldnames, dialect="myDialect")
    writer.writeheader()
    writer.writerows([{'Grade': 'B', 'Name': 'Anu'},
                      {'Grade': 'A', 'Name': 'Beena'},
                      {'Grade': 'C', 'Name': 'Tarun'}])
print("writing completed")
```

When we open grade.csv file, it will contain following output:

```
"Name"|"Grade"
"Anu"|"B"
"Beena"|"A"
"Tarun"|"C"
```

In the above program, a custom dialect called myDialect with pipe (|) as delimiter uses the fieldnames as headings of each column to write in a csv file. Finally, we use a DictWriter() to write dictionary data into "grade.csv" file.

13.7.8 Getting Data At Runtime And Writing It In a CSV File

You can even accept the data through keyboard and write in to a CSV file. For example the following program accept data from the user through key board and stores it in the file called "dynamicfile.csv". It also displays the content of the file.
