```
class threeWheeler: public Vehicle
{  public:
      threeWheeler()
      {
         cout<<"Objects with 3 wheels are vehicles"<<endl;
      }
};
// sub class derived from two base classes
class Auto: public threeWheeler {
      public:
         Auto()
      {
         cout<<"Auto has 3 Wheels"<<endl;
      }
};
// main function
int main()
{
      //creating object of sub class will invoke the constructor of base classes
      Auto obj;
      return 0;
}
```

```
// Save this file as inheri_cpp.cpp
//Now select File → New in Notepad and type the Python program
# Save the File as classpy.py
# Python classpy.py -i  inheri_cpp  command to execute c++ program
