Note

Detailed installation procedures given in Annexure

16.2 Getting Started

After installing Matplotlib, we will begin coding by importing Matplotlib using the command:

```
import matplotlib.pyplot as plt
```

Now you have imported Matplotlib in your workspace. You need to display the plots. Using Matplotlib from within a Python script, you have to add plt.show() method inside the file to display your plot.

Example

```
import matplotlib.pyplot as plt
plt.plot([1,2,3,4])
plt.show()
```

Output

This window is a matplotlib window, which allows you to see your graph. You can hover the graph and see the coordinates in the bottom right.
