Plotting Two Lines

To plot two lines, use the following code:

```
import matplotlib.pyplot as plt
    x = [1,2,3]
    y = [5,7,4]
    x2 = [1,2,3]
    y2 = [10,14,12]
    plt.plot(x, y, label='Line 1')
    plt.plot(x2, y2, label='Line 2')
    plt.xlabel('X-Axis')
    plt.ylabel('Y-Axis')
    plt.title('LINE GRAPH')
    plt.legend()
    plt.show()
```

Output

With plt.xlabel and plt.ylabel, you can assign labels to those respective axis. Next, you can assign the plot's title with plt.title, and then you can invoke the default legend with plt. legend().
