
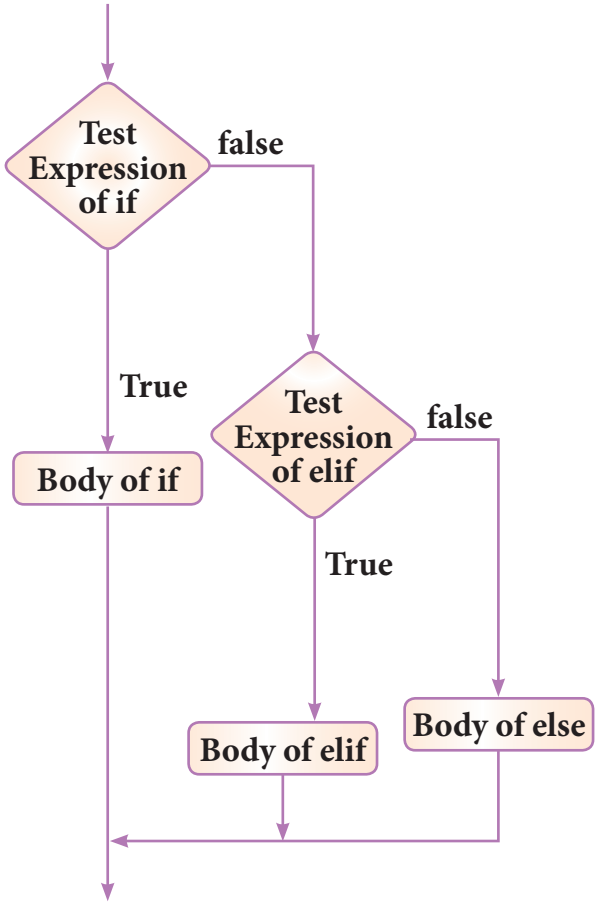

Fig 6.2 if..elif..else statement execution

'elif' clause combines **if..else-if..else** statements to one **if..elif…else. 'elif'** can be considered to be abbreviation of **'else if'.** In an **'if'** statement there is no limit of **'elif'** clause that can be used, but an **'else'** clause if used should be placed at the end.

Note

if..elif..else statement is similar to nested if statement which you have learnt in C++.
