Example 6.9: #program to illustrate the use of for loop - to print single digit even number

```
for i in range (2,10,2):
        print (i, end=' ')
```

Output:

2 4 6 8

Following is an illustration using else part in for loop

Example 6.10 : #program to illustrate the use of for loop - to print single digit even number with else part

```
for i in range(2,10,2):
        print (i,end=' ')
else:
        print ("\nEnd of the loop")
```

Output:

2 4 6 8
End of the loop

Note

In Python, indentation is important in loop and other control statements. Indentation only creates blocks and sub-blocks like how we create blocks within a set of { } in languages like C, C++ etc.

Here is another program which illustrates the use of range() to find the sum of numbers 1 to 100

Example 6.11: # program to calculate the sum of numbers 1 to 100

```
n = 100
sum = 0
for counter in range(1,n+1):
        sum = sum + counter
print("Sum of 1 until %d: %d" % (n,sum))
```

Output:

Sum of 1 until 100: 5050

In the above code, *n* is initialized to 100, *sum* is initialized to 0, the *for* loop starts executing from 1, for every iteration the value of sum is added with the value of counter variable and stored in sum. Note that the for loop will iterate from 1 till the upper limit -1 (ie. Value of n is set as 100, so this loop will iterate for values from 1 to 99 only, that is the reason why we have set the upper limit as n+1)
