Summary

Macroeconomics studies the behavior and performance of an economy as a whole. It covers the functioning, performance and growth of an economy. It examines the macro aspects such as employment, national income, inflation, business cycle, poverty, inequality, disparity, investment and saving, capital formation, infrastructure development, banking, public finance, international trade, balance of trade and balance of payments, exchange rate and economic growth. Economic models based on economic variables are useful in understanding an economy. Circular Flow Models provide a base to understand the functioning of a macro economy.

An economy could be classified on the basis of economic systems such as capitalistic economy, socialistic economy and mixed economy. However, nowadays it is difficult to find 100 percent capitalist system, socialistic system or perfectly mixed economy.

Glossary

- **Macroeconomics :** The branch of economics that studies the behavior and performance of an economy as a whole
