Logic

Method calls are statements. Ruby also provides a number of ways to make decisions that affect the repetition and order in which methods are invoked.

Control Structures

Ruby has all the usual control structures, such as `if` statements and `while` loops. Java, C, and Perl programmers may well get caught by the lack of braces around the bodies of these statements. Instead, Ruby uses the `end` keyword to signify the end of a body:

```
if count > 10
  puts "Try again"
elsif tries == 3
  puts "You lose"
else
  puts "Enter a number"
end
```

Similarly, `while` statements are terminated with `end`:

```
while weight < 100 and num_pallets <= 30
  pallet = next_pallet()
  weight += pallet.weight
  num_pallets += 1
end
```

Ruby also contains variants of these statements. `unless` is like `if`, except that it checks for the condition to *not* be true. Similarly, `until` is like `while`, except that the loop continues until the condition evaluates to be true.

Ruby *statement modifiers* are a useful shortcut if the body of an `if`, `unless`, `while`, or `until` statement is a single expression. Simply write the expression, followed by the modifier keyword and the condition:

```
puts "Danger, Will Robinson" if radiation > 3000
```
