```
    STDERR.puts "File #{file_name} not found"
  rescue BlogDataFormatError
    STDERR.puts "Invalid blog data in #{file_name}"
  rescue Exception => exc
    STDERR.puts "General error loading #{file_name}: #{exc.message}"
  end
```

`rescue` clauses can be directly placed on the outermost level of a method definition without needing to enclose the contents in a `begin`/`end` block.

That concludes our brief introduction to control flow. At this point you have the basic building blocks for creating larger structures.
