`presence: true` tells the validator to check that each of the named fields is present and that its contents aren't empty. The following screenshot shows what happens if we try to submit a new product with none of the fields filled in. Try it by visiting `http://localhost:3000/products/new` and submitting the form without entering any data. You'll see the errors summarized in a nice list at the top of the form. That's not bad for one line of code. You might also have noticed that after editing and saving the `product.rb` file, you didn't have to restart the application to test your changes. The same reloading that caused Rails to notice the earlier change to our schema also means it'll always use the latest version of our code.

We'd also like to validate that the price is a valid, positive number. We'll use the delightfully named `numericality` option to verify that the price is a valid
