number. We also pass the rather verbosely named `:greater_than_or_equal_to` option a value of `0.01`:

```
validates :price, numericality: { greater_than_or_equal_to: 0.01 }
```

Now, if we add a product with an invalid price, the appropriate message will appear, as shown in the following screenshot.

Why test against one cent rather than zero? Well, it's possible to enter a number such as 0.001 into this field. Because the database stores just two digits after the decimal point, this would end up being zero in the database, even though it would pass the validation if we compared against zero. Checking that the number is at least one cent ensures that only correct values end up being stored.
