```
class StoreController < ApplicationController
  def index
»   @products = Product.order(:title)
  end
end
```

We asked our customer if she had a preference regarding the order things should be listed in, and we jointly decided to see what happens if we display the products in alphabetical order. We do this by adding an `order(:title)` call to the `Product` model.

Now we need to write our view template. To do this, edit the `index.html.erb` file in `app/views/store`. (Remember that the path name to the view is built from the name of the controller [`store`] and the name of the action [`index`]. The `html.erb` part signifies an ERB template that produces an HTML result.)
