Iteration C2: Adding a Page Layout

The pages in a typical website often share a similar layout; the designer will have created a standard template that's used when content is placed. Our job is to modify this page to add decoration to each of the store pages.

If you look at the `html.erb` files we've created so far, you won't find any reference to style sheets. You won't even find the HTML `<head>` section where such references would normally live. Instead, Rails keeps a separate file that's used to create a standard page environment for the entire application. This file, called `application.html.erb`, is a Rails layout and lives in the `layouts` directory: we can change the look and feel of the entire site by editing this one file. This makes us feel better about putting a placeholder page layout in for now; we can update it when the designer eventually returns from the islands.

Let's update this file to define a banner and a sidebar:

rails80/depot_e/app/views/layouts/application.html.erb

```
<!DOCTYPE html>
<html>
  <head>
» <title><%= content_for(:title) || "Pragprog Books Online Store" %></title>
    <meta name="viewport" content="width=device-width,initial-scale=1">
    <meta name="apple-mobile-web-app-capable" content="yes">
    <meta name="mobile-web-app-capable" content="yes">
    <%= csrf_meta_tags %>
    <%= csp_meta_tag %>

    <%= yield :head %>

    <%# Enable PWA manifest for installable apps (make sure to enable in
        config/routes.rb too!) %>
    <%#= tag.link rel: "manifest", href: pwa_manifest_path(format: :json) %>

    <link rel="icon" href="/icon.png" type="image/png">
```
