Iteration D1: Finding a Cart

As users browse our online catalog, they will (we hope) select products to buy. The convention is that each item selected will be added to a virtual shopping cart, held in our store. At some point, our buyers will have everything they need and will proceed to our site's checkout, where they'll pay for the stuff in their carts.

This means that our application will need to keep track of all the items added to the cart by the buyer. To do that, we'll keep a cart in the database and store its unique identifier, `cart.id`, in the session. Every time a request comes in, we can recover that identifier from the session and use it to find the cart in the database.

Let's go ahead and create a cart:

```
depot> bin/rails generate scaffold Cart
 ...
depot> bin/rails db:migrate
== 20250420000003 CreateCarts: migrating
=======================================
-- create_table(:carts)
  -> 0.0016s
== 20250420000003 CreateCarts: migrated (0.0016s)
==============================
```

Rails makes the current session look like a hash to the controller, so we'll store the ID of the cart in the session by indexing it with the `:cart_id` symbol:

rails80/depot_f/app/controllers/concerns/current_cart.rb

```
module CurrentCart
  private

    def set_cart
      @cart = Cart.find(session[:cart_id])
    rescue ActiveRecord::RecordNotFound
```
