Now let's modify the `LineItemsController` to find the shopping cart for the current session (creating one if one isn't there already), add the selected product to that cart, and display the cart contents.

We use the `CurrentCart` concern we implemented in Iteration D1 to find (or create) a cart in the session:

rails80/depot_f/app/controllers/line_items_controller.rb

```
  class LineItemsController < ApplicationController
»   include CurrentCart
»   before_action :set_cart, only: %i[ create ]
    before_action :set_line_item, only: %i[ show edit update destroy ]

    # GET /line_items or /line_items.json
    #...
  end
```

We `include` the `CurrentCart` module and declare that the `set_cart` method is to be involved before the `create` action. We explore action callbacks in depth in *Callbacks*, but for now all you need to know is that Rails provides the ability to wire together methods that are to be called before, after, or even around controller actions.

In fact, as you can see, the generated controller already uses this facility to set the value of the `@line_item` instance variable before the `show`, `edit`, `update`, or `destroy` actions are called.

Now that we know that the value of `@cart` is set to the value of the current cart, all we need to modify is a few lines of code in the `create` method in `app/controllers/line_items_controller.rb`. to build the line item itself:

rails80/depot_f/app/controllers/line_items_controller.rb

```
    def create
»     product = Product.find(params[:product_id])
»     @line_item = @cart.line_items.build(product: product)
```
