

Go back to http://localhost:3000/, the main catalog page, and add a different product to the cart. You'll see the original two entries plus our new item in your cart. It looks like we have sessions working.

We changed the function of our controller, so we know that we need to update the corresponding functional test.

For starters, we only need to pass a product ID on the call to `post`. Next, we have to deal with the fact that we're no longer redirecting to the line items page. We're instead redirecting to the cart, where the cart ID is internal state data residing in a cookie. Because this is an integration test, instead of focusing on how the code is implemented, we should focus on what users see after following the redirect: a page with a heading identifying that they're looking at a cart, with a list item corresponding to the product they added.

We do this by updating `test/controllers/line_items_controller_test.rb`:

rails80/depot_g/test/controllers/line_items_controller_test.rb

```
    test "should create line_item" do
      assert_difference("LineItem.count") do
»       post line_items_url, params: { product_id: products(:pragprog).id }
      end

»     follow_redirect!
»
```
