Here’s some stuff to try on your own:

- Add a new variable to the session to record how many times the user has accessed the store controller’s `index` action. Note that the first time this page is accessed, your count won’t be in the session. You can test for this with code like this:

  ```
  if session[:counter].nil?
    ...
  ```

  If the session variable isn’t there, you need to initialize it. Then you’ll be able to increment it.

- Pass this counter to your template, and display it at the top of the catalog page. Hint: the `pluralize` helper () might be useful for forming the message you display.

- Reset the counter to zero whenever the user adds something to the cart.

- Change the template to display the counter only if the count is greater than five.
