whenever a new line item is created. Add prices to the `line_items.yml` fixture.

- Write unit tests that add both unique products and duplicate products to a cart. Assert how many products should be in the cart in each instance. Note that you'll need to modify the fixture to refer to products and carts by name—for example, `product: pragprog`.

- Check products and line items for other places where a user-friendly error message would be in order.

- Add the ability to delete individual line items from the cart. This will require buttons on each line, and such buttons will need to be linked to the `destroy` action in the `LineItemsController`.

- We prevented accessing other users' carts in the `LineItemsController`, but you can still see other carts by navigating directly to a URL like `http://localhost/carts/3`. See if you can prevent accessing any cart other than the one currently stored in the session.
