capture the customer's name, email, and address. We'll cover form helpers in more depth in *Generating Forms*.

The only tricky thing in there is the code associated with the selection list. We use the keys defined for the `pay_type enum` for the list of available payment options. We also pass the `:prompt` parameter, which adds a dummy selection containing the prompt text.

We also adjust the background and text color of the submit button as well as the text for the button itself.

We're ready to play with our form. Add some stuff to your cart, then click the Checkout button. You should see something like the following screenshot.

Looking good! Before we move on, let's finish the `new` action by adding some validation. We'll change the `Order` model to verify that the customer enters data for all the input fields. We'll also validate that the payment type is one of the accepted values:

rails80/depot_o/app/models/order.rb
