rails80/depot_o/test/fixtures/line_items.yml

```
# Read about fixtures at
# https://api.rubyonrails.org/classes/ActiveRecord/FixtureSet.html

one:
  product: two
  cart: one
  price: 1

two:
» product: pragprog
» order: one
  price: 1
```

Note that if you didn't choose to do the optional exercises in *Playtime*, you need to modify all of the references to products and carts at this time and *not* add `price` to the line items.

Feel free to make other changes, but only the first is currently used in the functional tests. For these tests to pass, we'll need to implement the model.

Capturing the Order Details

Let's implement the `create` action in the controller. This method has to do the following:

1. Capture the values from the form to populate a new `Order` model object.

2. Add the line items from our cart to that order.

3. Validate and save the order. If this fails, display the appropriate messages, and let the user correct any problems.

4. Once the order is successfully saved, delete the cart, redisplay the catalog page, and display a message confirming that the order has been placed.
