We define the relationships themselves, first from the line item to the order:

rails80/depot_o/app/models/line_item.rb

```
  class LineItem < ApplicationRecord
»   belongs_to :order, optional: true
    belongs_to :product
»   belongs_to :cart, optional: true

    def total_price
      price * quantity
    end
  end
```

And then we define the relationship from the order to the line item, once again indicating that all line items that belong to an order are to be destroyed whenever the order is destroyed:

rails80/depot_o/app/models/order.rb

```
  class Order < ApplicationRecord
»   has_many :line_items, dependent: :destroy
    # ...
  end
```

The method ends up looking something like this:

rails80/depot_o/app/controllers/orders_controller.rb

```
  def create
    @order = Order.new(order_params)
»   @order.add_line_items_from_cart(@cart)

    respond_to do |format|
      if @order.save
»       Cart.destroy(session[:cart_id])
»       session[:cart_id] = nil
»       format.html { redirect_to store_index_url, notice:
»         "Thank you for your order." }
        format.json { render :show, status: :created,
          location: @order }
      else
```
