No surprises here. Finally, we need a purchase order number field, which we put into a third partial:

rails80/depot_p/app/views/orders/_po.html.erb

```
<fieldset data-payment-target="additionalFields" data-type="Purchase order">
  <div class="my-5">
    <%= form.label :po_number %>
    <%= form.number_field :po_number, class: "input-field" %>
  </div>
</fieldset>
```

Now that we're done with the additional fields, it's time to update the form itself:

rails80/depot_p/app/views/orders/_form.html.erb

```
<%= form_with(model: order, class: "contents") do |form| %>
  <% if order.errors.any? %>
    <div id="error_explanation" class="bg-red-50 text-red-500 px-3 py-2
      font-medium rounded-md mt-3">
      <h2><%= pluralize(order.errors.count, "error") %>
      prohibited this order from being saved:</h2>

      <ul class="list-disc ml-6">
        <% order.errors.each do |error| %>
          <li><%= error.full_message %></li>
        <% end %>
      </ul>
    </div>
  <% end %>

  <div class="my-5">
    <%= form.label :name %>
    <%= form.text_field :name, class: "input-field" %>
  </div>

  <div class="my-5">
    <%= form.label :address %>
    <%= form.textarea :address, rows: 4, class: "input-field" %>
  </div>
```
