generally the default is to do nothing. If the controller doesn't match, then no code will be executed. If no additional fields are found, the loop won't hide anything.
- Feel free to add calls to `console.log` inside your Stimulus controller.

For the times when you really want to run all of your tests with a single command, Rails has this covered too: try running `bin/rails test:all`.

What We Just Did

In a fairly short amount of time, we did the following:

- We created a form to capture details for the order and linked it to a new order model.
- We added validation and used helper methods to display errors to the user.
- We provided a feed so the administrator can monitor incoming orders.

Playtime

Here's some stuff to try on your own:

- Get HTML- and JSON-formatted views working for `who_bought` requests. Experiment with including the order information in the JSON view by rendering `@product.to_json(include: :orders)`. Do the same thing for XML using `ActiveModel::Serializers::Xml`.[67]
- What happens if you click the Checkout button in the sidebar while the checkout screen is already displayed? Can you find a way to disable the button in this circumstance?
- The list of possible payment types is currently stored as a constant in the `Order` class. Can you move this list into a database table? Can you
