variables.

Email Templates

The generate script created two email templates in app/views/order_mailer, one for each action in the OrderMailer class. These are regular erb files. We'll use them to create plain-text emails (you'll see later how to create HTML email). As with the templates we use to create our application's web pages, the files contain a combination of static text and dynamic content. We can customize the template in received.text.erb; this is the email that's sent to confirm an order:

rails80/depot_q/app/views/order_mailer/received.text.erb

```
Dear <%= @order.name %>

Thank you for your recent order from The Pragmatic Store.

You ordered the following items:

<%= render @order.line_items -%>

We'll send you a separate e-mail when your order ships.
```

The partial template that renders a line item formats a single line with the item quantity and the title. Because we're in a template, all the regular helper methods, such as truncate, are available:

rails80/depot_q/app/views/line_items/_line_item.text.erb

```
<%= sprintf("%2d x %s",
            line_item.quantity,
            truncate(line_item.product.title, length: 50)) %>
```

We now have to go back and fill in the received method in the OrderMailer class:

rails80/depot_qa/app/mailers/order_mailer.rb
