rails80/depot_qa/app/views/order_mailer/shipped.html.erb

```
<h3>Pragmatic Order Shipped</h3>
<p>
  This is just to let you know that we've shipped your recent order:
</p>

<table>
  <tr><th colspan="2">Qty</th><th>Description</th></tr>
<%= render @order.line_items -%>
</table>
```

We don’t need to modify the partial, because the existing one will do just fine:

rails80/depot_qa/app/views/line_items/_line_item.html.erb

```
<% if line_item == @current_item %>
<tr class="line-item-highlight">
<% else %>
<tr>
<% end %>
  <td class="text-right"><%= line_item.quantity %></td>
  <td>&times;</td>
  <td class="pr-2">
    <%= line_item.product.title %>
  </td>
  <td class="text-right font-bold">
    <%= number_to_currency(line_item.total_price) %>
  </td>
</tr>
```

But for email templates, Rails provides a bit more naming magic. If you create multiple templates with the same name but with different content types embedded in their filenames, Rails will send all of them in one email, arranging the content so that the email client can distinguish each.

This means you’ll want to either update or delete the plain-text template that Rails provided for the `shipped` notifier.
