```
      params.require(:order).permit(:po_number)
    else
      {}
    end
  end
```

The method will be somewhat long and has to do three things. First, it must adapt the `pay_type_params` that you just created to the parameters that `Pago` requires. Second, it should make the call to Pago to collect payment. Finally, it must check to see if the payment succeeded and, if so, send the confirmation email. Here's what the method looks like:

rails80/depot_qb/app/models/order.rb

```
» require "pago"

  class Order < ApplicationRecord
    enum :pay_type, {
      "Check"          => 0,
      "Credit card"    => 1,
      "Purchase order" => 2
    }
    has_many :line_items, dependent: :destroy
    # ...
    validates :name, :address, :email, presence: true
    validates :pay_type, inclusion: pay_types.keys
    def add_line_items_from_cart(cart)
      cart.line_items.each do |item|
        item.cart_id = nil
        line_items << item
      end
    end

»   def charge!(pay_type_params)
»     payment_details = {}
»     payment_method = nil
»
»     case pay_type
»     when "Check"
»       payment_method = :check
»       payment_details[:routing] = pay_type_params[:routing_number]
»       payment_details[:account] = pay_type_params[:account_number]
```
