rails80/depot_r/app/controllers/users_controller.rb

```
    def create
      @user = User.new(user_params)

      respond_to do |format|
        if @user.save
»         format.html { redirect_to users_url,
»           notice: "User #{@user.name} was successfully created." }
          format.json { render :show, status: :created, location: @user }
        else
          format.html { render :new, status: :unprocessable_entity }
          format.json { render json: @user.errors,
            status: :unprocessable_entity }
        end
      end
    end
```

Let’s do the same for an update operation:

```
    def update
      respond_to do |format|
        if @user.update(user_params)
»         format.html { redirect_to users_url,
»           notice: "User #{@user.name} was successfully updated." }
          format.json { render :show, status: :ok, location: @user }
        else
          format.html { render :edit, status: :unprocessable_entity }
          format.json { render json: @user.errors,
            status: :unprocessable_entity }
        end
      end
    end
```

While we’re here, let’s also order the users returned in the index by `name`:

```
    def index
»     @users = User.order(:name)
    end
```

Now that the controller changes are done, let’s attend to the view. We need to update the form used to create a new user and to update an existing user.
