rails80/depot_t/config/locales/en.yml

```
en:

  store:
    index:
      title_html:   "Your Pragmatic Catalog"
    product:
      add_html:     "Add to Cart"
```

And here it is in Spanish:

rails80/depot_t/config/locales/es.yml

```
es:

  store:
    index:
      title_html:   "Su Cat&aacute;logo de Pragmatic"
    product:
      add_html:     "A&ntilde;adir al Carrito"
```

Note that since `title_html` and `add_html` end in the characters `_html`, we're free to use HTML entity names for characters that don't appear on our keyboard. If we didn't name the translation key this way, what you'd end up seeing on the page is the markup. This is yet another convention that Rails has adopted to make your coding life easier. Rails will also treat names that contain `html` as a component (in other words, the string `.html.`) as HTML key names.

By refreshing the page in the browser window, we see the results shown in the following screenshot.
