```
    <div class="my-5">
»     <%= form.label :address, t('.address_html') %>
      <%= form.textarea :address, rows: 4, class: "input-field" %>
    </div>

    <div class="my-5">
»     <%= form.label :email, t('.email') %>
      <%= form.email_field :email, class: "input-field" %>
    </div>

    <div data-controller="payment">
      <div class="my-5">
        <%= form.label :pay_type, t(".pay_type") %>
        <%= form.select :pay_type,
»         Order.pay_types.keys.map {|key| [t(".pay_types.#{key}"), key] },
»                       { prompt: t('.pay_prompt_html') },
                        'data-payment-target' => 'selection',
                        'data-action' => 'payment#showAdditionalFields',
                        class: "input-field" %>
      </div>

      <%= render partial: 'check', locals: {form: form} %>
      <%= render partial: 'cc', locals: {form: form} %>
      <%= render partial: 'po', locals: {form: form} %>
    </div>

    <div class="inline">

»     <%= form.submit t('.submit'),
        class: "w-full sm:w-autorounded-md
          px-3.5 py-2.5 bg-green-200 hover:bg-blue-500 text-black
          inline-block font-medium cursor-pointer" %>
    </div>
  <% end %>
```

That covers the form elements that Rails is rendering, but what about the Stimulus-controlled additional payment details we added in *Defining Additional Fields*? Once again, the ability to have everything rendered by the server from a common set of templates makes this concern go away. First, we update the credit card fields:
