The error messages that Active Record produces can also be translated; what we need to do is supply the translations:

rails80/depot_t/config/locales/es.yml

```
es:

  activerecord:
    errors:
      messages:
        inclusion: "no est&aacute; incluido en la lista"
        blank:     "no puede quedar en blanco"
  errors:
    template:
      body:        "Hay problemas con los siguientes campos:"
      header:
        one:       "1 error ha impedido que este %{model} se guarde"
        other:     "%{count} errores han impedido que este %{model} se
guarde"
```

Although you can create these with many trips to Google Translate, the Rails i18n gem's GitHub repo contains a lot of translations for common strings in many languages.[82]

Note that messages with counts typically have two forms: errors.template.header.one is the message that's produced when there's one error, and errors.template.header.other is produced otherwise. This gives the translators the opportunity to provide the correct pluralization of nouns and to match verbs with the nouns.

Since we once again made use of HTML entities, we want these error messages to be displayed as is (or in Rails parlance, *raw*). We also need to translate the error messages. So, again, we modify the form:

rails80/depot_u/app/views/orders/_form.html.erb

```
» <%= form_with(model: order, class: "contents",
»   url: orders_path(locale: I18n.locale)) do |form| %>
```
