```
»       t.string :subject, comment: "Subject of their support email"
»       t.text :body, comment: "Body of their support email"
»       t.references :order,
»                    foreign_key: true,
»                    comment: "their most recent order, if applicable"
        t.timestamps
      end
    end
  end
```

With this in place, we can create this table via `bin/rails db:migrate`:

```
> bin/rails db:migrate
== 20250420121503 CreateSupportRequests: migrating
==========================
-- create_table(:support_requests)
   -> 0.0016s
== 20250420121503 CreateSupportRequests: migrated (0.0017s)
=================
```

We'll also need to adjust the model itself to optionally reference an `order`:

rails80/depot_tb/app/models/support_request.rb

```
  class SupportRequest < ApplicationRecord
»   belongs_to :order, optional: true
  end
```

And we'll need to create the inverse relationship in the `Order` model:

rails80/depot_tb/app/models/order.rb

```
  class Order < ApplicationRecord
    enum :pay_type, {
      "Check"          => 0,
      "Credit card"    => 1,
      "Purchase order" => 2
    }
    has_many :line_items, dependent: :destroy
»   has_many :support_requests, dependent: :nullify
    # ...
```
